

Poly Cote

POLYMER MODIFIED PAVEMENT SEALER

Poly Cote is a refined tar emulsion pavement sealer modified with a unique blend of high performance polymers. It's advanced formula provides exceptional wear resistance, flexibility and adhesion. Polycote has been used successfully in some of the harshest traffic conditions a pavement sealer can be subjected to. Polycote significantly outlasts conventional pavement sealers.

- Proven performance in high speed traffic conditions
- Polymer modified for superior adhesion and wear resistance
- Colloid milled for consistent, trouble free performance

High Performance

Polycote has been used successfully on high speed egress and fueling areas of toll road service plazas, access roads and high traffic parking areas for years. This innovative pavement sealer provides durability that no conventional pavement sealer can.

Exceptional Value

Polycote's exceptional durability makes it an excellent choice for any application where additional longevity is desired. Greater durability means not having to seal as often, providing greater value than conventional pavement sealers.

Consistent

Polymerized and manufactured with our proprietary colloid mill process, every gallon of polycote produced is the same as the the one before - load to load, year to year. Consistency you can count on.

Specification Proven

Meets or exceeds ASTM D2939, ASTM D-3320, ASTM D-6948
