No. 231

JULY 2004
(Supersedes June 2002)

DIRECT FIRE (PLS) Hot-Applied Parking Lot Sealant

DESCRIPTION

DIRECT FIRE (PLS) is formulated specifically for melting and heating in direct fire kettles. It is a single-component, hot-applied, self-leveling sealant to be used for sealing joints and cracks in Portland cement or asphalt concrete pavements. PLS is easily melted and applied, and will form a flexible, resilient, non-tracking seal suitable for use on both highways and parking lots.

TECHNICAL DATA

Test	Typical Result	Recommended Specification
Penetration, 77° F	50	15-75
Resilience, %:	55%	40% (min.)
Softening point, °F	210° F	200° F (min.)
Flexibility, 90° bend, 1" mandrel @ 0 °F	Pass	Pass
Viscosity @ 400° F	500 cps	
Weight/gallon	8.8 lbs./gal.	

Maximum Safe Heating Temperature: 450° F

Recommended Pouring Temperature: 400° F

PACKAGING

50 lb. carton containing two (2) 25-pound blocks, individually wrapped in poly bag liners.

APPLICATION

Melting... Material can be melted in either a direct fire or oil jacketed kettle. Kettles should be equipped with an agitator and properly functioning temperature gauges. The polymers contained in PLS can withstand temperatures up to 450°F.

After melting, the material should be agitated mechanically. Material may be added as the sealant is drawn off. The product is capable of being reheated several times and will not gel when overheated or heated for extended periods.

CONTINUED ON REVERSE SIDE...

Surface Preparation... The joints and cracks to be sealed must be clean and dry. Dust, dirt and laitance should be removed prior to application. Proper routing should be slightly larger than the existing crack/joint to ensure proper adhesion to sidewalls.

Concrete or Asphalt Pavement and Maintenance Sealing - For ideal sealing with maximum effectiveness, it is suggested that cracks or joints be routed out to provide a sealant reservoir 1/2" (12.7mm) wide with a minimum depth of 1/2" (12.7mm). This provides for a 1:1 width-to-depth ratio. For joints 1" (25.4mm) wide, the suggested depth is 1/2" (12.7mm) minimum. To control and maintain the suggested joint depth and sealant usage, CERA-ROD™ Heat-Resistant Backer Rod from W. R. MEADOWS may be installed in the joint opening.

Sealant application... Material can be applied by pressure applicator or pour pot. Material should be applied between 350°F and 450°F. The recommended application temperature is 400°F. The sealant should be

applied into the crack/joint, slightly overfilling. For optimum performance, a follow-up should be done with a soft rubber, U-shaped squeegee to form a wipe zone of approximately 3-4 inches (76.2-101.9mm) wide along the crack/joint and flush with the highway or pavement surface. The crack-filler should be tack free prior to coating with a blacktop sealer.

PRECAUTIONS

PLS can be reheated several times. The material will not gel when overheated or heated for extended periods. Temperatures above 400°F for extended periods (over 6 hours) will begin to soften the material. If heated above 450°F, the material will begin to degrade and lose its flexibility.

HEALTH HAZARDS

Avoid direct contact with heated material, as it may cause severe burns. Avoid inhalation of product fumes/vapors. If contact with heated material occurs, cool area with water and seek medical attention. Do not attempt to remove congealed solid from skin. Refer to Material Safety Data Sheet for complete health and safety information.
