Product Data Sheet Yellow Fast Dry Latex Traffic Marking Paint #11005Y

PRODUCT DESCRIPTION PRODUCT CHARACTERISTICS A 100% acrylic latex fast drying marking paint for concrete, brick, and bituminous surfaces. This product has been designed for Vehicle Type: Acrylic Latex Polymer painting centerlines, edge lines and auxiliary markings of highways, Viscosity: 83 to 98 KU runways, parking lots, traffic aisles, crosswalks, etc. Weight Solids: 73% minimum Volume Solids: 58% minimum Pigment Solids: 50% to 54% **PERFORMANCE CHARACTERISTICS** Density (Weight per Gallon): Formulated to Meet IDOT 1095.02 Specification 12.69 ± 0.20 lbs/gal Test Description | Test Method Requirements Results VOC (minus exempts): 101 g/L IDOT 1095.02 Color (yellow) Fed. Std. 595 Pass Pass VOC (with exempts): 67 g/L #33538 Dry time: No-Pick-Up: 5 – 10 minutes Reflectance IDOT 1095.02 50% minimum Pass Dry Through: 10 – 15 minutes Fineness of ASTM D1210 Pass 3 Hegman min. (Note: Applied film thickness, relative humidity and temperature will Grind affect dry time) **Dry Time** ASTM D711 10 minutes max. Pass No-Pick-Up Shelf Life: 12 months if unopened and stored in a cool area. Dry Time Drv ASTM D1640 15 minutes max. Pass Through Flexibility TT-P-1952D Pass Pass Freeze-Thaw TT-P-1952D Pass THIS PRODUCT DOES NOT CONTAIN MERCURY, LEAD, HEXAVALENT 3 cycles Resistance CHROMIUM, TOLUENE, CHLORINATED SOLVENTS, HYDROLYSABLE Accelerated CHLORINE DERIVATIVES Package TT-P-1952D <10 Ku change Pass OR CARCINOGENS AS DEFINED IN 29 CFR 1910.1200. Stability Water Pass TT-P-1952D Pass Resistance Storage Stability IDOT 1095.02 <5 Ku change Pass Note: These results represent actual control values when tested under **Dry Opacity** IDOT 1095.02 0.97 minimum Pass laboratory conditions. To the best of our knowledge, the above technical data is true and accurate at the date of issuance but is subject to change without prior notice.

READ AND FOLLOW ALL INSTRUCTIONS AND WARNINGS ON PRODUCT LABELS AND DATA SHEETS.

Product Data Sheet Yellow Fast Dry Latex Traffic Marking Paint #11005Y

WATERBORNE TRAFFIC MARKING PAINT APPLICATION REQUIREMENTS	
SURFACE PREPARATION	Coverage
The surface to be painted must be dry and free of loose paint, grease, oil, and dirt. Striping paints will not adhere to unclean surfaces. New concrete must be allowed to fully cure before painting. Adhesion can be adversely affected by sealers and efflorescence on new concrete. These should be removed by etching, abrasive blasting, or allowing the surface to weather for an extended period of time. New concrete and/or asphalt should be allowed to age for several months before painting. Shrinking of the paint film during drying can cause lifting or cracking of asphalt if the surface is not fully cured. Applying a test stripe to test for adequate cure of new asphalt is recommended. If painting new asphalt is necessary, using a reduced film thickness will minimize the possibility of asphalt lifting. Excessive film build will increase the chance of lifting.	Coverage is dependent upon user and usage. Normally, approximately 90 square feet per gallon. In terms of striping, approximately 20 gallons will stripe a 4-inch line one mile using a mechanical striper. Using a truck mounted spraying system, approximately 16 gallons will stripe a 4-inch line one mile. Over applying paint may cause "mud cracking" and may affect adhesion and longevity. Under applying paint may cause premature wear off and/or premature fading of color.
THINNING	Spray Equipment
None is normally required, but a small amount of water may be added if needed. DO NOT add gasoline, oil or any other petroleum-based products to waterborne paints. Adding any amount of thinner may adversely affect dry time.	Application equipment must be clean from all previous paint(s). The use of non-stainless steel spray equipment is strongly discouraged as an alkaline paint may "surface shock" when exposed to other mild metals. Only stainless steel or plastic spray equipment should be used.
Application	CLEAN UP
Stir all containers thoroughly before using. Paint only in dry weather. Straining the paint when using spray equipment is recommended. May be applied by a marking machine, roller, or brush. No surface priming is required. Apply to a wet film thickness of 14-16 mils to yield a dry film thickness of 8-10 mils. For best results apply at substrate temperatures of 50°F and rising. When using glass beads, 4 - 6 pounds of beads per gallon is recommended. If spraying, do not mix beads directly into paint. When striping in cold temperatures, the warmer the paint the easier it is to spray. Recommended application conditions: 50°F minimum and 90°F maximum. Apply at least 5 °F above dew point with a relative humidity below 85%.	Clean all brushes, rollers, tools, and paint lines immediately with warm water and a mild detergent to prevent drying. If drying does occur, a mild caustic solution should remove dried film.
	DRYING TIMES
	Dry times are dependent upon weather conditions both before and after application. See Product Characteristics for more information.
	HANDLING SAFETY
	Avoid prolonged or repeated contact with skin. Avoid breathing of vapors or spray mist. Do not take internally. Close container after each use. Wear respirator, eye protection and protective clothing when handling. See SDS for further information.
