

Traffic and Parking Safety

Rubber Wheel Stop - Six Foot

Description

Heavy duty rubber wheel stops are manufactured from premium quality rubber for maximum strength and durability. Able to withstand any weather or climate condition.

Designed with large areas of high quality reflective tape on each side and ends for improved visibility at night.

At four inches in overall height, these wheel stops are lower in height than most concrete parking stops and reduce risk of damage to cars with lower profiles.

Installation

Can be installed on asphalt or concrete surfaces.

Use six (6) inch lag bolts to attach wheel stops to parking area surface through four (4) pre-drilled holes. Pre-drilled holes are counter sunk to allow installation with bolt heads recessed below top of wheel stops.

KEY ADVANTAGES

- **Durable** - High quality rubber composition is long-lasting in any climate
- **Visible** - Yellow or White reflective tape is easy to see in any lighting condition
- **Easy to install** - pre-drilled for lag bolt installation
