

Eclipse® PLUS

PETROLEUM RESIN PAVEMENT SEALER

Eclipse® PLUS is a high performance alternative to asphalt based sealers. It is a petroleum resin emulsion pavement sealer and acceptable for use in areas where refined tar sealers are restricted. Eclipse® PLUS is polymer modified for exceptional durability and wear resistance. Eclipse® PLUS provides significantly better resistance to oil, gasoline and oxidation from sunlight than asphalt based sealers.

- Polymer Modified for Exceptional Durability
- Colloid Milled for Consistent, Trouble Free Performance
- Alternative to both refined tar and asphalt based sealers
- Significantly out-performs asphalt based sealers

Durable

Eclipse® PLUS is polymer modified for improved toughness and durability. Eclipse® PLUS is made from a uniquely processed petroleum resin and offers performance similar to refined tar pavement sealer. Eclipse® PLUS resists penetration and damage to the underlying pavement from gasoline and oil. Eclipse® PLUS provides excellent resistance to oxidation and wear resistance, significantly outperforming any asphalt based pavement sealer.

Great Value

Eclipse® PLUS lasts much longer than asphalt based sealers. Polymer modified formula offers long lasting beauty and protection for asphalt pavements.

Consistent

Manufactured with our proprietary colloid mill process. Every gallon of Eclipse® PLUS produced is the same as the the one before - load to load, year to year. Consistency you can count on.

Versatile

Eclipse® PLUS contains no coal tar. It is acceptable for use in most locations where using refined tar pavement sealer is restricted. Eclipse® PLUS is burn free. It does not photosensitize skin. Eclipse® PLUS can be applied in lower temperatures than asphalt emulsion pavement sealers. Although it contains no coal tar, Eclipse® meets the performance criteria for ASTM and FAA specifications for both asphalt and coal tar based products.
