

Guard Cote™

ASPHALT EMULSION PAVEMENT SEALER

Guard Cote™ is a polymerized high performance asphalt emulsion pavement sealer. Unlike other asphalt emulsion sealers, Guard Cote™ is produced from a modified asphalt with our exclusive continuous process colloid mill.

Guard Cote™ significantly outperforms other asphalt emulsion sealers.

- Preserves and protects asphalt pavements
- Produced from performance engineered asphalt
- Colloid milled for consistent, trouble free performance
- Compliant with regulations for sealer PAH content

Durable

Guard Cote™ exceeds the performance criteria described in most specifications for asphalt based pavement sealers. While it has similar composition to pavement sealers made from SS1-h or CSS1-h, Guard Cote™ is emulsified in our state of the art process with an asphalt specifically produced for exceptional performance as a pavement sealer. Guard Cote™ has superior wear resistance compared to conventional asphalt based sealers.

Great Value

Seals and weatherproofs porous asphalt surfaces. Helps protect asphalt pavements from oxidation caused by sunlight.

Consistent

We are the industry benchmark for production consistency and quality control. Every gallon of Guard Cote™ produced is the same as the the one before. Load to load, year to year. Consistency you can count on.

Regulatory Compliant

Guard Cote™ is compliant with any bans or restrictions for coal tar or PAH content. It contains no other restricted materials and typical PAH values are well below 0.1%. Guard Cote™ is water based and has minimal odor. VOC is less than 50 grams per liter. Guard Cote™ does not photosensitize the skin like coal tar or petroleum resin sealers.
